Weekly Report

Week: #<2>
Name: Ugur Yavuz Dogan

01 What was accomplished last week
- I have created the login screen
- I have adjusted the gamescreen
- I have created the Text class and library within and the getrandomText method
- I have created Carshpe method that assigns every players car a shape
- I have added update car progress method that updates coordinate of the car accordingly to the player progress.
- I have also volunteered to do the presentation on monday but my friends also helped me

02 What's planned until next week
- Finish the basic game we started.
- Learn fxml files
- Make a better looking game

03 What went well
- I think we work well as a team everyone tries to help eachother.
- After seeing what others have done we didn't get demotivated instead we started working harder to finish project.

04 What were there problems with
- Being behind from most of the teams

05 Feedback to the team and tutor
- Right now i feel like we are doing good but not great after seeing other teams we could all agree that we should step up our game and I have seen improvements on this matter. Communication is going great we are almost always available to each other and decide things together. I just don't want people to get discouraged by other's work because we should keep in mind that we are inexperienced relative to other teams and we should just do our best and focus on our work. I believe the end product will look great.
